1 INTRODUCTION

1.1 DOCUMENT PURPOSE

This Test Report describes the test results from the core Flight Executive (cFE) Flight Software (FSW) Test Team build 6.6.0.0 verification testing. It is used to verify that the cFE FSW has been tested in a manner that validates that it satisfies the functional and performance requirements defined within the cFE FSW Requirements Specification and all Discrepancy/Change Request (DCR)/Trac Ticket fixes and code updates assigned to build 6.6.0.0. This Test Report summarizes the FSW test history, the build verification process, the build test configuration, and the test execution and results

1.3 DOCUMENT ORGANIZATION

Section 1 of this document presents some introductory material.

Section 2 provides a flight software overview and context along with the test history and testing overview.

Section 3 describes the build verification process including procedure development and execution and test products produced.

Section 4 describes the build test configuration which includes an overview of the testbed and the requirements verification matrix.

Section 5 describes the test execution and results by subsystem.

5.6.1 provides the Requirements Traceability Matrix

Appendix A - provides the Command, Telemetry, and Events Verification Matrix

1.4 DEFINITIONS

There were 3 verifications methods used during build verification testing. They were:

- <u>Demonstration:</u> Show compliance with system requirement by exhibiting the required capability (e.g. by demonstrating interactive capability, display capability, print capability, etc.
- <u>Inspection:</u> Show compliance with a system requirement by visual verification of the software (e.g. verifying preparation for delivery, proper interfacing)
- <u>Analysis:</u> Perform detailed analysis of code, generated data (both intermediate data and final output data), etc., to determine compliance with system requirements.

The fields in the Requirements Verification Matrix in Section 4.3 are defined as follows:

- <u>Requirements Tested Passed</u>: Requirement was fully tested in a build test procedure and passed all tests.
- Requirements Tested Failed: Requirement was fully tested in a build test procedure and failed one or more aspect of the testing.
- Requirements Tested Partially: Requirement was tested partially in a build test procedure. To be fully tested, the partially tested requirement is either tested additionally in one or more other test procedures within the same build **and/or** other aspects of the requirement must be tested in a later build, due to capabilities not present in the current build
- <u>Total Tested</u>: Total number of requirements fully tested in a build test procedure. Includes total passed and total failed, but does **not** include requirements tested partially, **unless** (included as a separate entry) testing in multiple procedures within the same build constitutes total testing of a particular requirement. Total Requirements Tested is computed this way in order to avoid multiple counting of individual requirements that are tested partially in more than one procedure.
- <u>Deferred</u>: Number of requirements that were planned to be tested in current build, but were not tested due to some FSW capability or necessary system component not being present.
- <u>Total</u>: Total Requirements Tested + Number of Requirements Deferred

In each software test section in Section 5 there is a table of DCR's. The state definitions are as follows:

- Opened: The DCR is currently being addressed
- Assigned: The DCR was accepted and the modification is being addressed
- <u>InTest:</u> The DCR was corrected and is currently in test
- <u>Validated</u>: The DCR was corrected and tested and have been validated, needs to have a CCB to close the DCR
- <u>Closed:</u> The DCR is closed and have been resolved and tested to satisfaction
- <u>Closed with Defect:</u> The DCR is closed and the defect is most likely assigned a differed DCR number associated with another subsystem.

2.1 FLIGHT DATA SYSTEM CONTEXT

Build verification was performed using cFE in a single flight processor context, as depicted in Figure 2-1. The ground system interfaces with the lab Applications Command Ingest (CI), Scheduler (SCH), and Telemetry Output (TO) and not directly with the cFE. Spacecraft operators send Commands and Files to the cFE and receive Files, Events, and Telemetry from the cFE. Note that this context is relative to the cFE and does not show ground communications with other Applications. For example, a typical spacecraft has a Stored Command (SC) Application that receives stored command loads from the ground and sends stored command dumps to the ground.

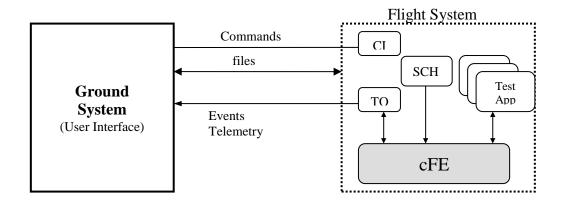

Figure 2-1 cFE Single Flight Processor Context

cFE 6.6.0.0 - Build Verification Testing completed 11/20/17 by Walt Moleski

2.3 TESTING OVERVIEW

There are 5 cFE core subsystems that are tested during Build Verification testing. There are a total of 20 test procedures that could be executed. cFE 6.6.0.0 executed all of these test procedures. Refer to the tables below for these procedures for more information on what they test. These test procedures are modified to test any new capabilities developed in a build as well as DCR fixes that were contained in a build.

For each build prior to cFE 6.0.0, a new test account was created for the testers to use. As of cFE 6.0.0, a single test account is used. This account runs the Advanced Spacecraft Integration and System Test (ASIST) software and is setup to contain all the files needed to test the cFE. These files are extracted from MKS, the source repository tool. Included in these files are test utilities. These utilities can be located in 2 places depending upon whether they are "local" or "global" utilities. The local utilities are extracted into the working prc directory (\$WORK/prc). The global utilities are pointed to by ASIST in the global area defined on the test system. Additional tools utilized by the test procedures are located in the \$TOOLS directory.

The following utilities were used during testing:

Name	Description
scx_cpu1_check_sb_msgcnt	Checks if the change in the message count per msg id is as expected.
scx_cpu1_print_sb_pipes	Prints the status of all the test app pipes.
scx_cpu1_print_all_pipes	Prints the SB routing table.
CFE_startup	Directive combines the "start_data_center", "open_tlm", and "open cmd <cpu>" ASIST startup commands.</cpu>
CFE_shutdown	Directive combines the "close_data_center" and "exit" ASIST shutdown commands.
create_tbl_file_from_cvt	Procedure that creates a load file from the specified arguments and cvt
evs_app_unreg	Procedure that request the generation of one event message which is registered for filtering and one which is not.
evs_ctr_check	To verify application evt msg sent counter EVS msg sent counter and App bin filter ctr.
evs_fltrinfo	To output evt msg filter info.
evs_gen_dis_ty	To request generation of event messages while all Evt Msg Tupes are DISABLED
evs_gen_evts	To request generation of evt msgs when requirement cEVS3103 is fully met
evs_gen_no_evts	To request generation of evt msgs while Event Message Generation is DISABLED
evs_mskd_evt	To request generation of evt msgs after change of binary filter mask from 0 to ffff (always filter) for the event message registered for filtering
evs_test_app_info	To provide test application information
ftp_file	To ftp a file to/from the FSW/GSW.
get_file_to_cvt	Procedure to write some specified FSW data to a file and then FTP the file from the FSW hardware to ASIST hardware and load file to the CVT.
get_tbl_to_cvt	Procedure that dumps the specified table from the processor and loads it into the cvt
load_start_app	Procedure to load and start a user application from the /s/opr/accounts/cfebx/apps/cpux directory.
load_table	Procedure that takes the specified file and transfers the file to the specified processor and then issues a TBL_LOAD command using the file.
tst_tbl_apps_start	Procedure that checks if the TST_TBL and TST_TBL2 applications are running and starts them if they are not.
ut_pfindicate	Directive to print the pass fail status of a particular requirement number.
ut_runproc	Directive to formally run the procedure and capture the log file.
ut_sendcmd	Directive to send EVS commands Verifies command processed and command error counters.
ut_sendrawcmd	Send raw commands to the spacecraft. Verifies command processed and command error counters.
ut_setrequirements	A directive to set the status of the cFE requirements array.

Core Flight Executive Flight Software Build Verification Test Report Build 6.6.0.0

ut_setupevents	Directive to look for multiple events and increment a value for each event to indicate receipt.	
ut_tlmupdate	Procedure to wait for a specified telemetry point to update.	
ut_tlmwait	Directive that waits for the specified telemetry condition to be met	

3 BUILD VERIFICATION TEST PREPARATION

3.1 SCENERIO DEVELOPMENT

There were no new scenarios developed for build verification test 6.6.0.0. All scenarios are stored on the MKS server, in cfe-project test-and-ground directory within the test-review-packages subdirectory in the Scenarios folder.

3.2 PROCEDURE DEVELOPMENT AND EXECUTION

This build test was completed by running 20 test procedures, 3 for Executive Services (ES), 2 for Time Services (TIME), 5 for Event Services (EVS), 4 for Software Bus (SB), 3 for Table Services (TBL), and 3 procedures that required the cFE Core software to be modified. All test procedures were written using the Spacecraft Test and Operations Language (STOL). The naming convention for files output from these test procedures was: scx_cpu<#>_<procedure name>_GMT.<ext>.

3.3 TEST PRODUCTS

Five log files were generated for every procedure that was run. They are defined as follows:

- Logs with the .loge extension list all events sent by the flight software
- Logs with the .logr extension list all requirements that passed validation by demonstration
- Logs with the .logp extension lists all prints that are generated by the test procedure
- Logs with the .logf extension lists everything from the other logs along with the steps in the test procedure
- Logs with the .logs extension lists the Standard Formatted Data Unit (SFDU) information (if applicable) contained in the full log.

A Test Report is developed by the tester after build testing is completed. The log files are stored on the test machine in the \$WORK/test_logs/cFE6.6.0 folder. The data files generated are stored in the \$WORK/image folder. All test products are maintained on MKS in the cfe-project test-and-ground directory.

4 BUILD VERIFICATION TEST EXECUTION

4.1 TESTBED OVERVIEW

The cFE build verification testbed consists of two ASIST workstations running ASIST version 20.2 and two MPC750 CPU boards running VxWorks 6.4 and VxWorks 6.9. CPU1 was primarily used for the development and build verification testing of the older cFE releases. CPU2 is currently under development and is not being used. CPU3 was used for cFE 6.6.0 build verification testing. Figure 4-1 depicts the testbed.

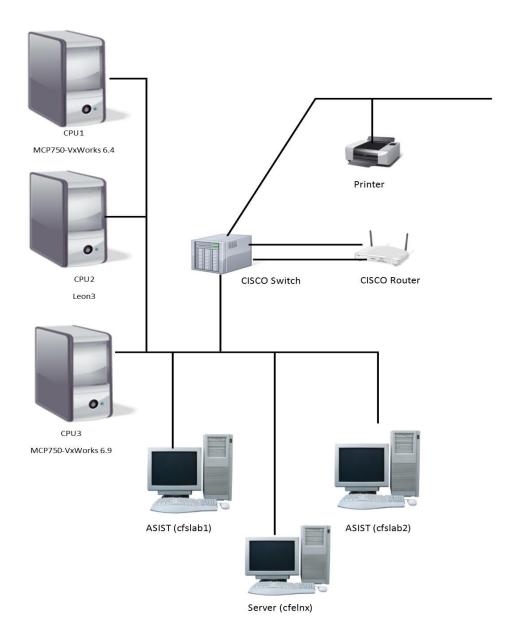

Figure 4-1: cFE Build Verification Testbed

4.2 REQUIREMENTS VERIFICATION MATRIX

Subsystem	Requirements Tested Passed	Requirements Tested Failed	Requirements Tested Partially	Total Tested	Deferred	Total
Executive Services (ES)	135	0	4 - Untestable	139	7	146
Time Services (TIME)	33	0	0	33	6	39
Event Services (EVS)	65	0	0	65	0	65
Software Bus (SB)	35	0	0	35	0	35
Tables (TBL)	51	0	0	51	0	51

4.3 REQUIREMENTS PARTIALLY TESTED

No requirements were partially tested.

4.4 REQUIREMENTS DEFERRED

The rational for why these requirements are deferred is contained in the Requirements to Test Traceability Matrix (RTTM). Please refer to that document for additional information.

Requirement	Description
cES1324	Upon receipt of a Request, the cFE shall load and initialize a hardware device driver and connect it with the specified hardware handshaking and device processing code.
cES1325	Upon receipt of a Request, the cFE shall unload a specified hardware device driver and de-allocate all previously allocated resources used by the driver.
cES1326	Upon receipt of a Request, the cFE shall disable a specified hardware device driver.
cES1326.1	If the specified hardware device driver is not loaded, then the cFE shall record the error in the System Log, and return an error code.
cES1327	Upon receipt of a Request, the cFE shall re-enable a specified hardware device driver.
cES1327.1	If the specified hardware device driver is not loaded, then the cFE shall record the error in the System Log, and return an error code.
cES1508.3	The cFE shall create and initialize cFE Device Drivers according to the entry in the cFE Startup File.
cTIME2012.1	The cFE shall ignore Time Updates while in Flywheel state.
cTIME2013	Upon receipt of Command the cFE shall adjust the spacecraft time by adding the Command specified value (seconds and subseconds) to spacecraft time
cTIME2014	Upon receipt of Command the cFE shall adjust the spacecraft time by subtracting the Command specified value (seconds and subseconds) from spacecraft time
cTIME2701	The cFE Time Services Server shall send a "time at the tone" Software Bus message within a <mission_defined> period of time preceding or following the tone.</mission_defined>
cTIME2702	The cFE Time Services Server shall update its MET using the timer hardware interface defined in the cFE Application Developer's Guide.
cTIME2703	The cFE shall define a MET with a <mission_defined> resolution.</mission_defined>

5 BUILD VERFICIATON TEST RESULTS

5.1 EXECUTIVE SERVICES (ES)

5.1.1 Overall Assessment

During this build test of the ES subsystem:

- 111 requirements passed demonstration
- 26 requirements were validated by analysis.
- 4 requirements were untestable.
- 7 requirements were deferred for Mission testing
- No new DCRs/Trac Tickets were generated during testing

5.1.2 Procedure Description

Procedure	Description	Requirements tested
es_appctrl	The purpose of this test is to verify the cFE	cES1005, cES1005.1, cES1005.2,
- 11	Executive Services (ES) software meets the	cES1005.3, cES1005.4, cES1006,
	requirements defined in the SRS for the	cES1006.1, cES1007, cES1007.1,
	de/fined Executive Services logs (System,	cES1007.2, cES1007.3, cES1008,
	Exception and Reset, and Logic Analyzer	cES1008.1, cES1008.2,
	Capture).	cES1008.3, cES1011, cES1012,
		cES1012.1, cES1013, cES1013.1,
		cES1026, cES1027, cES1300,
		cES1302, cES1303, cES1304,
		cES1305, cES1306, cES1307,
		cES1309, cES1309.1, cES1310,
		cES1310.1, cES1310.2,
		cES1310.3, cES1311, cES1311.1,
		cES1311.2, cES1312, cES1312.1,
		cES1313, cES1314, cES1314.1,
		cES1315, cES1315.1, cES1315.2,
		cES1316, cES1316.1, cES1316.2,
		cES1319, cES1320, cES1320.1,
		cES1320.2, cES1321, cES1321.1,
		cES1321.2, cES1321.3, cES1322,
		cES1322.1, cES1323, cES1328,
		cES1328.1, cES1328.2, cES1700,
		cES1708
es_logging	The purpose of this test is to verify the cFE	cES1005, cES1005.1, cES1009,
	Executive Services (ES) software meets the	cES1010, cES1014, cES1014.1,
	requirements defined in the SRS for the	cES1014.2, cES1014.2.1,
	defined Executive Services logs (System,	cES1014.2.2, cES1015, cES1016,
	Exception and Reset, and Logic Analyzer	cES1016.1, cES1017, cES1018,
	Capture).	cES1019, cES1021, cES1022,
		cES1022.1, cES1022.2, cES1023,
		cES1023.1, cES1024, cES1025,
		cES1028, cES1509, cES1510,
		cES1511, cES1512, cES1520,
		cES1522, cES1702, cES1702.1,
		cES1702.2, cES1703, cES1703.1,
		cES1703.2, cES1706, cES1707,
		cES1709

Procedure	Description	Requirements tested
es_reset	The purpose of this test is to verify the cFE	cES1000, cES1001, cES1002,
	Executive Services (ES) software meets the	cES1003, cES1004, cES1005,
	requirements defined in the SRS for power-	cES1005.1, cES1009, cES1010,
	on and processor resets.	cES1012, cES1016, cES1016.1,
		cES1017, cES1019, cES1301,
		cES1301.1, cES1317, cES1318,
		cES1500, cES1501, cES1502,
		cES1503, cES1504, cES1505,
		cES1506, cES1507, cES1508,
		cES1508.1, cES1508.2, cES1509,
		cES1510, cES1511, cES1512,
		cES1513, cES1514, cES1515,
		cES1516, cES1517, cES1518,
		cES1518.1, cES1518.2, cES1519,
		cES1519.1, cES1519.2, cES1520,
		cES1521
CFE_AltImage	The purpose of this test is to verify four (4)	cES1517.1, cES1702.3,
	cFE requirements that require a	cES1703.3, cTIME2502.1
	modification to the cFE Core software. The	
	following changes were made to the fsw:	
	• cfe_es_start.c - Modified	
	CFE_ES_InitializeFileSystems to force	
	the failure of the volatile file system.	
	• cfe_es_task.c - Modified the	
	CFE_ES_NoopCmd function to perform	
	a floating point divide by zero in order to	
	cause an exception to be generated in the	
	CORE FSW.	
	• cfe_time_utils.c - Modified the	
	CFE_TIME_QueryResetVars function to	
	set the DataStoreStatus for the reset area	
	to BAD.	
CFE_OSObjFailure	The purpose of this test is to verify cFE	cES1515.1
	requirement ES1515.1. In order to verify	
	this requirement, the cFE Core software	
	requires a modification. The modification	
	was to the cfe_es_objtab.c file to have an	
	OS Object creation failure. The	
	modification made was to change the stack	
	size of a CFE Core task entry from what	
	was specified to 1024. This is a size that is	
	smaller than the minimum (8192) size	
	specified.	
CFE_MyEH	The purpose of this test is to verify that cFE	cES1702.3; cES1703.3
	requirements ES1702.3 and ES1703.3 allow	
	a user-defined exception handler to be	
	created and used when exceptions occur.	

5.1.3 Untestable Requirements

The following requirements were identified during cFE build 6.6.0.0 verification testing as untestable. Additional untestable requirements are listed in Section 4.4, <u>Requirements Deferred</u>.

Requirement	Description	Reason for Untestable status
cES1702.2	If the CPU exception was caused by a cFE Application, the cFE shall restart the cFE Application that caused the exception.	The CPU resets rather than just restarting the application. The reason why this requirement is marked untestable is due to the VxWorks 6.9 kernel configuration on the platform being used to test and verify cFE 6.6.0. The unexpected behavior of performing a processor reset (rather than a task suspension) following a CPU exception was reproduced via a simple test function performing a divide by zero. This test function was loaded and run independently from the cFE core.
		Note: This requirement was tested and verified producing passing results on the older mcp750/VxWorks6.4 platform. See <u>Figure 4-1: cFE Build Verification Testbed.</u>
cES1702.3	If the CPU exception was caused by the Operating System or cFE Core then the cFE shall initiate a <platform_defined> response.</platform_defined>	The <platform_defined> exception handler did not get called. The PSP implementation used for testing cFE 6.6.0 was updated to provide an exception hook function that calls the <platform_defined> exception handler. However, the VxWorks operating system is initiating a CPU Reset before the PSP exception hook is being called. Thus, making this requirement untestable with the test platform.</platform_defined></platform_defined>
		Note: This requirement was tested and verified producing passing results on the older mcp750/VxWorks6.4 platform. See Figure 4-1: cFE Build Verification Testbed.
cES1703.2	If the Floating Point exception was caused by a cFE Application, the cFE shall restart the cFE Application that caused the exception.	The CPU resets rather than just restarting the application. The reason why this requirement is marked untestable is due to the VxWorks 6.9 kernel configuration on the platform being used to test and verify cFE 6.6.0. The unexpected behavior of performing a processor reset (rather than a task suspension) following a Floating Point exception was reproduced via a simple test function using floats to perform a divide by zero. This test function was loaded and run independently from the cFE core.
		Note: This requirement was tested and verified producing passing results on the older mcp750/VxWorks6.4 platform. See Figure 4-1: cFE Build Verification Testbed.

Requirement	Description	Reason for Untestable status
cES1703.3	If the Floating Point exception was caused by the OS or cFE Core then the cFE shall initiate a <platform_defined> response.</platform_defined>	The <platform_defined> exception handler did not get called. The PSP implementation used for testing cFE 6.6.0 was updated to provide an exception hook function that calls the <platform_defined> exception handler. However, the VxWorks operating system is initiating a CPU Reset before the PSP exception hook is being called. Thus, making this requirement untestable with the test platform.</platform_defined></platform_defined>
		Note: This requirement was tested and verified producing passing results on the older mcp750/VxWorks6.4 platform. See <u>Figure 4-1: cFE Build Verification Testbed.</u>

5.1.4 Analysis Requirements Verification

The following ES requirements were verified using analysis.

Requirement	Description	Status	Justification
cES1014.1	Each entry in the Executive Services System Log shall be time tagged with the time that the event happened.	Pass	There are several system log files dumped to the ground that can verify this requirement. The scx_cpu1_es_syslog15.log was viewed and it contained timestamped entries.
cES1014.2	The cFE shall calculate the number of bytes used and number of entries in Executive Services System Log	Pass	The ES Housekeeping display page in ASIST contains this information. Steps 1.11 of the ES_Logging test procedure attempt to fill the ES System Log and utilize the bytes used and print the number of entries contained in the System Log.
cES1014.2.1	If the Executive Services System Log is full and the System Log Mode is set to OVERWRITE then the cFE shall write all new entries from the top of the log	Pass	The system log dump file scx_cpu1_es_syslog1117.log verifies this requirement by showing a new entry in the system log at the top of the file.
cES1014.2.2	If the Executive Services System Log is full and the System Log Mode is set to DISCARD then the cFE shall discard all new entries	Pass	Step 1.11.4 writes a system log message when the mode is DISCARD. The files scx_cpu1_es_syslog1113.log and scx_cpu1_es_syslog1115.log were viewed. Both logs contained the same entries and the entry written in Step 1.11.4 was not contained in the scx_cpu1_es_syslog1115.log file.

Requirement	Description	Status	Justification
cES1017	The cFE shall maintain an Executive Services Exception and Reset Log which will log critical system data for exceptions and resets including: • A time stamp • Processor Context information • Critical system variables • ASCII string stating the reason for the reset	Pass	The Exception and Reset Log contained the stated components. This was verified by viewing the ASIST display page after transferring the scx_cpu1_er13.log file to the ground.
cES1022.1	The cFE shall store a timestamp along with the specified Logic Analyzer Capture Tag.	Pass	There are 2 performance log files generated by the ES_Logging test procedure. Viewing these files in the Software Timing Analyzer tool verified that each entry contained a timestamp.
cES1022.2	If the Logic Analyzer Capture Log is full, then the cFE shall write all new entries from the top of the log	Pass	The imported performance analysis file scx_cpu1_perf37.dat file indicates that the starting point is non-zero. This means that the file has overlapped data contained in it.
cES1311.2	In the event a child task attempts to create another child task, the cFE shall record the error in the System Log, and return an error code.	Pass	Step 3.4 of the es_appctrl procedure starts a child task that attempts to start another child task. The required system log messages were included in the scx_cpu1_es_app33syslog.log file indicating that a child cannot start a child task.
cES1314	Upon receipt of a Request, the cFE shall end execution of the calling cFE Child Task.	Pass	Step 3.8 of the es_appctrl procedure tests this requirement. The uart dump was captured and it contained the required message to verify that the child task has ended.
cES1314.1	If the calling task is the cFE Application Main Task, the cFE shall record the error in the System Log, and return an error code.	Pass	Step 3.7 of the es_appctrl procedure tests this requirement. The scx_cpu1_es_app36syslog.log file clearly contains the appropriate message indicating that a main task cannot be stopped with the CFE_ES_ExitChildTask API.
cES1321.2	If the specified Memory Pool identifier is invalid then the cFE shall record the error in the System Log, and return an error code.	Pass	Step 4.8 of the es_appctrl procedure tests this requirement by trying to allocate a memory block for a non-existing memory pool. The scx_cpu1_es_app48syslog.log file contains the required system log entry to verify this requirement.

Requirement	Description	Status	Justification
cES1501	Upon a Power-On Reset, the cFE shall clear the Executive Services System Log.	Pass	Step 4.5 in the ES_Reset test procedure dumps the system log to the scx_cpu1_es_syslog45.log after performing a Power-On reset. This log contained the system startup information.
cES1502	Upon a Power-On Reset, the cFE shall clear the Executive Services Exception and Reset Log.	Pass	Step 4.5 of the ES_Reset test procedure dumps the Exception and Reset log to the scx_cpu1_es_erlog45.log file after a Power-On reset. This file contains a single entry for the Power-On reset.
cES1505	Upon a Power-on Reset, the cFE shall create all operating system objects required by the cFE.	Pass	There are two system log files dumped by the ES_Reset test procedure that verify this requirement. The files scx_cpu1_es_syslog145.log and scx_cpu1_es_syslog45.log contain an entry indicating that the system objects were created.
cES1508.2	The cFE shall create and initialize cFE Shared Libraries according to the entry in the cFE Startup File.	Pass	The scx_cpu1_es_syslog145.log file contains an entry indicating that the cFE Test Library was initialized. This is the library contained in the startup script used when the system is started or reset.
cES1511	Upon a Processor Reset, the cFE shall preserve the Executive Services System Log.	Pass	The scx_cpu1_es_syslog1.log is dumped by the ES_Reset test procedure when a Processor Reset occurs. This file contained the previous entries and thus was preserved.
cES1512	Upon a Processor Reset, the cFE shall preserve the Executive Services Exception and Reset Log.	Pass	The Exception and Reset log was dumped after performing two Processor Resets in the ES_Reset test procedure. The files scx_cpu1_es_erlog35.log and scx_cpu1_es_erlog55.log contained the previous entries and thus were preserved.
cES1515	Upon a Processor Reset, the cFE shall create all operating system objects required by the cFE.	Pass	The scx_cpu1_es_syslog1.log file generated by the ES_Reset test procedure when a Processor Reset occurs contains an entry indicating that the system objects were created.
cES1515.1	If the creation of the operating system object fails, the cFE shall perform a power on reset.	Pass	The CPU reset and then halted. The cFE66_objFailure.uart file documents this failure.

Requirement	Description	Status	Justification
cES1518.2	The cFE shall create and initialize Shared Libraries according to the entry in the cFE Startup File.	Pass	Step 3.5 in the ES_Reset test procedure dumps the System Log to the scx_cpu1_es_syslog1.log file. This file contains and entry indicating that the cFE shared Library was initialized.
cES1519.2	The cFE shall create and initialize Shared Libraries according to the entry in the cFE Startup File.	Pass	Step 5.5 of the ES_Reset test procedure dumps the System log to scx_cpu1_es_syslog1.log. This file contained an entry indicating the cFE shared library was initialized.
cES1520	Upon a Processor Reset, the cFE shall make an entry in the Executive Services Exception and Reset Log recording the Processor Reset.	Pass	The ES_Logging test procedure dumps the Exception and Reset log to files after a Processor Reset occurs. The scx_cpu1_er110.log and scx_cpu1_er25.log files contain entries indicating the Processor Reset occurred.
cES1702.1	Upon detection of a CPU exception, the cFE shall add an entry in the Executive Services Exception And Reset Log.	Pass	The ES_Logging test procedure generates an exception using a test application in Step 2.3. The exception added an entry into the Exception and Reset log and can be verified with the scx_cpu1_er23.log file.
cES1703.1	Upon detection of an unmasked Floating Point exception, the cFE shall add an entry in the Executive Services Exception and Reset Log.	Pass	The ES_Logging test procedure generates an exception using a test application in Step 2.3. The exception added an entry into the Exception and Reset log and can be verified with the scx_cpu1_er23.log file.
cES1704	The cFE shall support a <platform_defined,tbd> by te volatile file system.</platform_defined,tbd>	Pass	This requirement was tested manually from the ASIST console by uploading a large file to the volatile file system and then attempting to generate another file. When the file system is full, the additional file creation command fails. I then removed the large file and issued the command again. This time the command passed and created the file. Although the uart output was not captured, the errors as well as the successful writes were contained in the uart.
cES1705	The cFE shall support a <platform_defined,tbd> by te non-volatile file system.</platform_defined,tbd>	Pass	The non-volatile file system was inspected and verified on the test CPU.

5.1.5 DCRs/Trac Tickets

No DCRs/Trac Tickets were generated during build testing.

5.1.6 Notes

Other than the untestable requirements mentioned above, there were no significant findings and/or anomalies reported during testing.

5.2 TIME SERVICES (TIME)

5.2.1 Overall Assessment

During this build test of the TIME subsystem:

- 32 requirements passed demonstration
- 1 requirement was validated by analysis
- 6 requirements were deferred for later testing
- No new DCRs/Trac Tickets were generated during testing

5.2.2 Procedure Description

Procedure	Description	Requirements tested
time_command_server_tai	The purpose of this test is to verify the Core Flight Executive (cFE) Time Services (TIME) common subsystem commands, time adjustment commands, clock selection commands, current time access requests, and time utility requests.	cTIME2000, cTIME2001, cTIME2002, cTIME2003, cTIME2004, cTIME2005, cTIME2006, cTIME2007, cTIME2008, cTIME2009, cTIME2010, cTIME2011, cTIME2012, cTIME2012.1, cTIME2013, cTIME2014, cTIME2300, cTIME2301, cTIME2302, cTIME2303, cTIME2304, cTIME2305, cTIME2306, cTIME2307, cTIME2309, cTIME2310, cTIME2311, cTIME2312, cTIME2313, cTIME2314
time_resets_server_tai	The purpose of this test is to verify the Core Flight Executive (cFE) Time Services (TIME) processor reset requirements.	cTIME2005, cTIME2006, cTIME2012, cTIME2306, cTIME2307, cTIME2308, cTIME2500, cTIME2501, cTIME2502, cTIME2700
CFE_AltImage	The purpose of this test is to verify four (4) cFE requirements that require a modification to the cFE Core software. The following changes were made to the fsw: • cfe_es_start.c - Modified	cES1517.1, cES1702.3, cES1703.3, cTIME2502.1

5.2.3 Analysis Requirements Verification

The following TIME requirements were verified using analysis.

Requirement	Description	Status	Justification
cTIME2314	Upon receipt of a Request the cFE shall return the provided system time in the following format; yyyy-ddd-hh:mm:ss.xxxxx\0	Pass	This requirement can be verified by looking at any ES System Log dump file generated by the cFE 6.6.0.0 test procedures. This was done and the time format was present in the system log.

5.2.4 DCRs/Trac Tickets

No DCRs/Trac Tickets were generated during build testing.

5.2.5 Notes

There were no significant findings and/or anomalies reported during testing.

5.3 EVENT SERVICES (EVS)

5.3.1 Overall Assessment

During this build testing of the EVS subsystem:

- 56 requirements were validated by demonstration
- 9 requirements were validated by analysis
- No new DCRs/Trac Tickets were generated during testing

5.3.2 Procedure Description

Procedure	Description	Requirements tested
evs_evt_msg_gen	The purpose of this test is to verify the	cEVS3004, cEVS3007, cEVS3008,
	functionality of the cFE Event Message	cEVS3012, cEVS3018, cEVS3100,
	generation software for Events Messages	cEVS3100.1, cEVS3100.2,
	that are registered for filtering as well as	cEVS3100.3, cEVS3101, cEVS3102,
	Event Messages that are not registered for	cEVS3103, cEVS3103.1,
	filtering.	cEVS3103.2, cEVS3103.3,
		cEVS3103.4.1, cEVS3103.6,
		cEVS3103.7, cEVS3104, cEVS3105,
		cEVS3109
evs_cmds	The purpose of this test is to verify the	cEVS3000, cEVS3002, cEVS3003,
	CFE_EVS Command functionality for the	cEVS3004, cEVS3004.1,
	Event Service (CFE_EVS) function of the	cEVS3005,cEVS3006, cEVS3007,
	Core Flight Executive (cFE). The operation	cEVS3008, cEVS3009, cEVS3010,
	of all CFE_EVS commands will be verified	cEVS3011, cEVS3017, cEVS3018,
	for valid and invalid commands.	cEVS3300

Procedure	Description	Requirements tested
evs_log	The purpose of this test is to verify the EVS log requirements for the Event Service (EVS) function of the Core Flight Executive (cFE) software. The operation of EVS Log will be verified in both the Overwrite and Discard modes. The Local Event Log Full flag, Local Event Log Overflow Counter, Event Logging Mode flag, and Event Format flag will be examined for proper value(s) during the execution of the test scenario. The contents of the Event Log will be periodically dumped from the FSW to the ASIST box for examination using telemetry pages and off-line analysis. The TST_EVS test application will be used to send multiple event messages. The supplied event text / event time will serve to uniquely identify each event message.	cEVS3001, cEVS3013, cEVS3014, cEVS3015, cEVS3015.1, cEVS3016, cEVS3018, cEVS3103.4, cEVS3103.5, cEVS3108, cEVS3108.1, cEVS3108.2, cEVS3108.3, cEVS3301
evs_bin_fltr	The purpose of bin_fltr test is to verify the correct functionality of the Binary Filter Process in the cFE FSW.	cEVS3003, cEVS3004, cEVS3009, cEVS3010, cEVS3011, cEVS3012, cEVS3019, cEVS3019.1, cEVS3019.2, cEVS3020, cEVS3020.1, cEVS3100, cEVS3100.1, cEVS3103, cEVS3104.1, cEVS3104.1, cEVS3105, cEVS3105.1, cEVS3106, cEVS3107, cEVS302
evs_reset	The purpose of evs_reset is to verify Event Message Services EVS behavior upon Power on and Processor Reset.	cEVS3017, cEVS3104, cEVS3110, cEVS3200, cEVS3201, cEVS3202, cEVS3203, cEVS3207, cEVS3208, cEVS3209, cEVS3210

5.3.3 Analysis Requirements Verification

The following EVS requirements were verified using analysis.

Requirement	Description	Status	Justification
cEVS3015	<optional> Upon receipt of Command, the cFE shall write the contents of the Local Event Log to the Command specified file.</optional>	Pass	Steps 4.5.1 and 4.5.2 of the evs_log test procedure sent commands specifying a filename and using the default filename for writing the contents of the Local Event Log. These files were transferred to the ground and displayed in the EVS_LOG ASIST display page. Both commands displayed the contents of the files.
cEVS3015.1	If a file is not specified, the cFE shall use the <platform_defined> filename.</platform_defined>	Pass	Steps 4.5.1 and 4.5.2 of the evs_log test procedure sent commands specifying a filename and using the default filename for writing the contents of the Local Event Log. These files were transferred to the ground and displayed in the EVS_LOG ASIST display page. Both commands displayed the contents of the files.
cEVS3016	<optional> The cFE shall write each Event Message from the earliest logged message to the most recently logged message.</optional>	Pass	Step 7.5.1 of the evs_log test procedure verifies this requirement. The step dumps the local event log and then prints it in the procedure log file. The entries of the log were in earliest to latest order.
cEVS3100	Upon receipt of Request, the cFE shall register an Application for event service, enabling the Application Event Service Enable Status and storing the following request specified Application data: Application Event IDs (for events to be filtered) Application Binary Filter Masks (one per registered Event ID)	Pass	The EVS Housekeeping, EVS_App_Data_Main and EVS_App_Data display pages were used to verify this requirement. All the listed applications in this display page were registered for event services. The event filter masks and messages were viewed in the EVS_App_Data display page.
cEVS3103.6	The requester shall be able to specify the Application ID to be used in the Event Message	Pass	This requirement was verified by viewing the log file and verifying that the event message contained the specified item.
cEVS3103.7	The requester shall be able to specify the time to be used in the Event Message.	Pass	This requirement was verified by viewing the log file and verifying that the event message contained the specified item.

Requirement	Description	Status	Justification
cEVS3108.3	<optional> If the Local Event Log is full, the cFE shall either (1) overwrite the oldest Event Message if the Event Logging Mode is overwrite, or (2) discard the Event Message if the Event Logging Mode is discard.</optional>	Pass	Steps 3.3.3, 3.4.1 and 4.2.1 of the evs_log test procedure verify this requirement. The local event log is written and displayed in the EVS_Log window as well as printed in the procedure log file. The analysis verifies that in the first two steps the log messages were overwritten and the last step verifies that the log remained the same.
cEVS3109	For each created Event Message, the cFE shall route the Event Message, formatted as an ASCII text string, to each enabled Event Message Output Port.	Pass	The uart window displayed multiple messages for a single event when multiple output ports were enabled. The vFE66_evs.uart log file contains thee messages and verifies this requirement.
cEVS3207	<optional> Upon a Processor Reset, the cFE shall preserve or overwrite the contents of the Local Event Log based upon the setting of the Event Logging Mode configuration parameter.</optional>	Pass	Step 3.1 of the evs_reset test procedure dumps and displays the local EVS log both before and after a Processor Reset. The file rst_284.log file is the contents before the reset and the rst_301.log is the contents after the reset. Verification of these files finds that the information was preserved after the reset since the configuration parameter was set to DISCARD.

5.3.4 DCRs/Trac Tickets

No DCRs/Trac Tickets were generated during build testing.

5.3.5 Notes

There were no significant findings and/or anomalies reported during testing.

5.4 SOFTWARE BUS SERVICES (SB)

5.4.1 Overall Assessment

During SB build verification testing

- 33 requirements were validated by demonstration
- 2 requirements were validated by analysis
- No new DCRs/Trac Tickets were generated

5.4.2 Procedure Description

Procedure	Description	Requirements tested
sb_enapipes	The purpose of this test is to verify that the	cSB4000, cSB4003, cSB4004,
	flight software satisfies the requirements	cSB4005, cSB4007, cSB4007.1,
	relating to enabling pipes.	cSB4300, cSB4301, cSB4302,
		cSB4303, cSB4304, cSB4305,
		cSB4305.5, cSB4305.6, cSB4306,
		cSB4307, cSB4308, cSB4309,
		cSB4701, cSB4704, cSB4705
sb_dispipes	The purpose of this test is to verify that the	cSB4001, cSB4002, cSB4003,
	flight software satisfies the requirements	cSB4003.1, cSB4005, cSB4008,
	relating to disabling pipes.	cSB4008.1, cSB4301, cSB4303,
		cSB4305.1, cSB4305.3, cSB4305.4,
		cSB4500, cSB4700, cSB4705,
		cSB4706
sb_cmds_err	The purpose of this test is to verify that the	cSB4004, cSB4005, cSB4305.6,
	flight software will reject SB commands	cSB4701
	with bad data in the command fields.	
sb_reset	The purpose of this test is to verify that the	cSB4303, cSB4303.1, cSB4310,
	SB flight software handles a Power-On and	cSB4500, cSB4501
	Processor reset according to the	
	requirements.	

5.4.3 Analysis Requirements Verification

The following SB requirements were verified using analysis.

Requirement	Description	Status	Justification
cSB4300	The cFE shall provide a zero-copy message transfer mode for intra-processor communication.	Pass	Step 11.0 of the sb_enapipes procedure tests this requirement. The TST_SB application generates an event message that prints the pointer of the SB zero copy message being sent and also generates an event message when the zero copy message is received. The pointers were identical.

cSB4310	Upon receipt of Request the cFE shall free resources allocation for the specified Application	Pass	Step 7.2 of the SB_Reset test procedure sends a command to stop the TST_SB application. When this command executes, there are numerous events generated and contained in the log file indicating that the TST_SB resources were "freed".
---------	---	------	--

5.4.4 DCRs/Trac Tickets

No DCRs/Trac Tickets were generated during build testing.

5.4.5 Notes

There were no significant findings and/or anomalies reported during testing.

5.5 TABLE SERVICES (TBL)

5.5.1 Overall Assessment

During this build testing of the TB subsystem:

- 49 requirements were validated by demonstration
- 2 requirements were validated by analysis
- No new DCRs/Trac Tickets were generated during testing

5.5.2 Procedure Description

Procedure	Description	Requirements tested
tbl_func	The purpose of this test is to verify the	cTBL6000, cTBL6000.5, cTBL6001,
	functionality of the cFE Table Services	cTBL6002, cTBL6002.1,
	commands.	cTBL6002.2, cTBL6003,
		cTBL6003.1, cTBL6003.1.1,
		cTBL6003.1.2, cTBL6005,
		cTBL6005.1, cTBL6006, cTBL6011,
		cTBL6012, cTBL6012.1,
		cTBL6012.2, cTBL6012.3,
		cTBL6300, cTBL6300.1, cTBL6301,
		cTBL6302, cTBL6302.1,
		cTBL6302.2, cTBL6303, cTBL6304,
		cTBL6305, cTBL6305.1,
		cTBL6305.2, cTBL6306, cTBL6308,
		cTBL6308.1, cTBL6309, cTBL6310,
		cTBL6311, cTBL6311.1,
		cTBL6311.2, cTBL6312, cTBL6700,
		cTBL6701
tbl_cmding	The purpose of this test is to verify the Table	cTBL6000, cTBL6000.1,
	Services commands.	cTBL6000.2, cTBL6000.3,
		cTBL6000.4, cTBL6001, cTBL6003,
		cTBL6007, cTBL6008, cTBL6009,
		cTBL6010, cTBL6011
tbl_reset	The purpose of this test is to verify that the	cTBL6500, cTBL6501, cTBL6501.1
	cFE Table Services (TBL) software meets	
	the requirements defined in the SRS for	
	Power-On and Processor Resets	

5.5.3 Analysis Requirements Verification

The following TBL requirements were verified using analysis.

Requirement	Description	Status	Justification
cTBL6308.1	If a Table is locked when an update Request is made, an appropriate error code shall be returned to the calling Application and the update shall not occur.	Pass	The cFE66_tblFunc.uart file contained an error indicating that the table was locked. Once the lock was removed, the table was updated appropriately.
cTBL6311.1	Upon providing a calling Application with the addresses of a Tables' data, the cFE shall lock the contents of the Tables to prevent modification.	Pass	Step 18.2 of the tbl_func test procedure attempts to update a table that is shared by another application. The error message displayed indicating that the table did not have any working buffers available to perform the update.

5.5.4 DCRs/Trac Tickets

No DCRs/Trac Tickets were generated during build testing.

5.5.5 Notes

There were no significant findings and/or anomalies reported during testing.

5.6 DCRS/TRAC TICKETS VERIFIED

The following DCRs/Trac Tickets were explicitly tested and/or verified during cFE 6.6.0.0 Build Verification testing. Build test procedures were not adequate for testing/verifying the DCRs/Trac Tickets whose test method indicates Demonstration, Analysis or Inspection and in some cases N/A.

DCR/ Ticket #	High Level Description of Functionality/Bug Report	Test Method	Test Approach
#12	External CFE message definitions should not depend on values from the cfe_platform_cfg.h or osconfig.h	Demonstration	All the rdl files and test procedures were modified to use the newly named macros.
#15	SMP: CFE_TIME_GetReference() has insufficient protection against update while reading	N/A	Code changes run through standard build test procedures.
#30	Review use of CFE_PSP_MemCpy/CFE_PSP_MemSet	Inspection	CFE_PSP calls were replaced by native memory calls.
#39	Enforce Strict ASCII	Inspection	All files containing non-ascii characters were updated to use strictly ASCII characters.
#43	SMP: CFE TIME uses OSAL IntLock/IntUnlock for mutual exclusion	N/A	Code changes run through standard build test procedures.
#44	SMP: CFE_ES_WriteToSyslog() is not multi- thread safe	N/A	Code changes run through standard build test procedures.
#46	Application Startup Race Conditions (GSFC DCR 22819)	N/A	cFE 6.6.0 appeared to startup properly.
#64	Suspicious implementation of SHORT_FORMAT mode in EVS_SendPacket(). The length of the short event packet does not differ from the long event packet.	Demonstration	A new telemetry packet was added and captured by the GSE to verify this change. Step 6.4 of the evs_log test procedure verifies this packet was received.
#83	Default Configuration Setting for CFE_ES_STARTUP_SCRIPT_TIMEOUT_MSEC is Too Big	Inspection	The specified macro was set to 1 second.
#86	Correction of an infinite loop in cfe_sb_task.c	Inspection	The code change described in this ticket was found in cfe_sb_task.c.
#100	Update CFE_ES_SYSTEM_LOG_SIZE Verify to Allow Larger Sys Log Files (GSFC DCR 22684)	Inspection	The cfe_es_verify.h file was updated to use a system macro (UINT32_MAX) vs. a hard-coded value of 16384.
#107	SB - Duplicate Pipe Creation Causes Failure to Delete Pipe (GSFC DCR 22934)	N/A	Unit testing verified this ticket.

DCR/ Ticket #	High Level Description of Functionality/Bug Report	Test Method	Test Approach
#111	Naming convention for macros in cfe_mission_cfg and cfe_platform_cfg	Demonstration	All the rdl files and test procedures were modified to use the newly named macros.
#115	Standardize Version Numbering (in CFE)	Inspection	Documentation changes to address standard version numbering updated.
#117	CFE_ES_GetAppName() undefined output when failure occurs	N/A	Unit testing verified this ticket.
#133	CFE_ES_AppCreate does not unload an object file if the entry point is not found	N/A	Unit testing verified this ticket.
#135	SB: "cfe_sb.h" should not depend on cfe_platform_cfg.h	Inspection	
#137	Possible buffer overrun in format strings used for scanf	N/A	Code changes run through standard build test procedures.
#140	EDS: The ES "LoadLibrary()" call - avoid duplicates and pass ID	N/A	Code changes run through standard build test procedures.
#143	ES does not check target file existence before attempting to reload an application	Demonstration	The es_appctrl test procedure verifies this ticket in Step 1.19 by attempting to reload an application with a non-existent file.
#144	SMP: Thread safety issues in CFE_TIME around the Sync Callbacks	N/A	Code changes run through standard build test procedures.
#156	Incorrect leap seconds in docs	Inspection	The correct value is now documented
#164	cFE cES1702.3 and cES1703.3 Requirement Failures	Inspection and N/A	Comments were changed in 6.6.0 and verified. However, the action still cannot be tested in the cFS Lab environment.
#165	Misleading cFE Doxygen: CFE_SB_DeletePipe	Inspection	Comments were changed in cfe_sb.h to address this issue.
#167	Additional CFE start up state for application sync	Inspection	The additional state was verified via an output of an additional message in the UART window.
#169	cFE Cmake Does Not Build Out-of-the-Box	N/A	Did not use Cmake
#170	Doxygen generator code had gotten stale	N/A	References Cmake system which was not used.

DCR/ Ticket #	High Level Description of Functionality/Bug Report	Test Method	Test Approach
#175	CCSDS APID Name Space Expansion	N/A	Unable to test in the cFS Lab environment. GSE changes required to use CCSDS V2 format.
#176	CCSDS Electronic Data Sheet (EDS) integration	N/A	Did not use EDS.
#177	Remove all MKS \$log comments in file header prologs	Inspection	All the files that were inspected did not contain the MKS \$log comment.
#180	'printf': Mismatch between the type expected by the conversion specifier %x and the type of the argument.	Analysis	During the cFE 6.6.0 compile process, there were no warnings related to this issue.
#183	ES Shell Command Telemetry Timing is Hardcoded	Inspection	The hardcoded value was replaced by a macro.
#184	cFE Performance IDs are Private Definitions	Inspection	Macro name changed to "MISSION"
#190	option to not receive messages I send?	N/A	
#193	CFE_SB_CreatePipe should avoid nesting locks	Inspection	Verified the stated change was contained in the source code.
#194	Add "Maximum EID" Comment to the Top of All cFE events.h Files	Inspection	All the event.h files contained this change.
#197	ES - Incorrect Use of CFE_SB_MessageStringGet Function in CFE_ES_ShellOutputCommand	Inspection	Verified the stated change was contained in the source code.
#198	Build failure when using std=c99	Analysis	The cFE core built successfully with this option set for the cFS Lab environment.
#199	CFE_ES mempool returns buffers that are not aligned	N/A	Code changes run through standard build test procedures.
#202	Clean up build warnings for CFE 6.6	Analysis	No build warnings were found in the compiler output for the cFS Lab environment.
#203	CMake script cleanup	N/A	
#204	CFE SB and TIME components missing length verification on incoming messages	Demonstration	Added tests for all cFE subsystems to test invalid command length.
#215	Table services sometimes copies buffers to itself	N/A	Code changes run through standard build test procedures.
#216	Table Services Task Pipe Function Incorrectly Handling Commands	Demonstration	Verified by sending CFE_TBL commands successfully.

DCR/ Ticket #	High Level Description of Functionality/Bug Report	Test Method	Test Approach
#217	Fix EDS discrepancies after #175 merge	N/A	Code changes run through standard build test procedures.
#219	ES - Memory Pool Size No Longer Requires 32-bit Alignment	Demonstration	Verified in es_logging test procedure. Step x.x requests a memory pool of size 1023 bytes which is successfully allocated.
#223	SB Remove PrintMsgHdr Function	Inspection	The function was not found in the source.
#225	Improve doxygen for CFE SB MsgId wrappers	Inspection	Changes made to doxygen comments in cfe_sb.h

5.6.1 Outstanding DCRs/Trac Tickets

Information on currently open Trac tickets is available at:

https://babelfish.arc.nasa.gov/trac/cfs_cfe/

Note this is a restricted website that require a server account. Additional Trac Tickets may have been submitted after preparation of this report. A cFE DCR and/or Trac Ticket report containing a listing of open DCRs and/or Track Tickets is available on request for customers who do not have access to the babelfish server. Please contact Susanne Strege, susie.strege@nasa.gov for detailed information on currently open Trac tickets if access to the babelfish server is restricted.

No.	Trac Ticket #	Description	Component	Status	Planned Delivery	Туре	Priority
